"Harry Potter and the philosopher's stone" – a book review.

Harry Potter and the philosopher's stone is the first out of six parts of books written by an English writer J.K. Rowling. It tells about a young boy who became a wizard. Harry is an eleven years old boy. He is overmarked with a scar on his forehead. It is his identification mark and a relic of the past. He lived in his aunt and uncle`s house. They have a son who doesn't like Harry the same like his parents. They disprize a magic which Harry is gifted. He finds out this when he gets a letter from a school of magic and wizardry at Hogwarts. Despite the opposition from his aunt and uncle he sets off to magic adventure with a giant Hagrid. He meets Hermione and Ron there. They becomes best friends. Protagonist experience a lot of amazing adventures, solves mysteries and finds out something about his past. In my opinion, the reader may think that amazing imaginary characters and their adventures, encourage many youngsters and older people to read it. The book is very interesting for people who like fantasy and who are into reading and don't want to sleep. It is one of my best books, which I recommend to everyone. It is for sure worth reading.
